             AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-NOV-2000;

Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                               25-FEB-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel gene library (A) comprises a gene sequence (or its part) encoding a protein involved in amino acid synthesis, cellular/energy metabolism, metabolism of fatty acids/phospholipids, synthesis or breakdown of purines/pyrimidines/nucleosides/nucleotides, DNA replication/transcription/translation, or is a transport/binding protein. A are produced that correspond to the 3'-end of mRNA but without the polya tail. They can be prepared more efficiently and with less effort than conventional libraries. AAK53436-AAK54275 represent fragments of the gene library described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gene library containing sequences with specific 3'-ends and no polyA tail, encoding proteins involved in a wide range of cellular processes {\sf tail},
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 15; Page 205-206; 251pp; German.

sequences from the Coryneform bacterium Corynebacterium glutamicum. The are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derive from Coryneform bacterium, and identifying a homologue of a gene derive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventueeful in developmental biology and in elucidating cell signalling cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01816-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAH68529;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAC57234 standard; DNA; 461

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
```

The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacla, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and EREBS, zinc finger domains of type 2 CysZHis2, CCAAT box elements

                                                                                                                                                                                                                                                                                               ARK54951 to ARK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic corottains and can be used in gene therapy and vaccine production. (I) treatment of diseases associated with inappropriate (I) expression. For certains and polynucleotides may be used in the prevention, diagnosis and cexample, they may be used to treat disorders associated with decreased that affect the activity of (I) by expressions in a patient's genome cuplement the patients own production of (I). Additionally, (I) composed the nucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the cuprotein. (I) proteins and polynucleotides may be used to provent.

CC diagnose and treat immune/haematopoietic antigen genomic to AAR87694 represent human immune/haematopoietic antigen genomic concerns and cancer metastases of haematopoietic antigen genomic concerns and cancer metastas

(1) have cytostatic cc aritivity, and can be used in gene therapy and vaccine production. (I) cc proteins and polynucleotides may be used in the prevention, diagnosis and cc proteins and polynucleotides may be used in the prevention, diagnosis and cc example, they may be used to treat disorders associated with inappropriate (I) expression. For cc expression by rectifying mutations or deletions in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to that affect the patients own production of (I). Additionally, (I) cc supplement the patients own production of (I). Additionally, (I) cc supplement the patients own production of (I). Additionally, (I) the nucleit acids into a host cell and culturing the cell to express the cc the nucleit acids into a host cell and culturing the cell to express the cc diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cc cancers and cancer metastases of haematopoietic antigen genomic to AAK87694 represent thuman immune/haematopoietic antigen genomic represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The present sequence encoding for human TANGO 405 protein is isolated CC from cDNA clone jthLa152h06 from a human mixed lymphocyte reaction cDNA CC (AAU00469), TANGO 364 (AAU00471), TANGO 365 (AAU00472), INTERCEPT 394 CC (AAU00473) and INTERCEPT 400 (AAU00476). Novel sequences for murine CC TANGO 210 (AAU00470), INTERCEPT 400 (AAU00477), TANGO 405 (AAU00480) and CC arat INTERCEPT 400 (AAU00478) sequence are also described. The nucleic CC regulating a variety of cellular processes and can be used to express CC murine TANGO 405 proteins show sequence homology to murine dectin-2. CC TANGO 405 proteins show sequence homology to murine dectin-2. CC TANGO 405 modulates growth, proliferation, survival, differentiation, cC activity, morphology and movement/migration of human lymphocytes and CC the marrow cells and tissues and can be used to prevent, diagnose or treat leukaemia, lymphomas and autoimmune disorders.

         The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune harmolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease militus, autoimmune thyroiditis, diabetes mellitus, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   08-NOV-2000

                                                                                                                          cc amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic cattivity, and can be used in gene therapy and vaccine production. (1) cc proteins and polynuclectides may be used in the prevention, diagnosis and ct treatment of diseases associated with inappropriate (1) expression. For cc example, they may be used to treat disorders associated with decreased cc that affect the activity of (1) by expressing in a patient's genome cc supplement the patients own production of (1). Additionally, (1) cc polynucleotides may be used to produce the secreted (1), by inserting cc polynucleotides may be used to produce the secreted (1), by inserting cc protein. (1) proteins and polynucleotides may be used to provent. (2) cancers and cancer metastases of haematopoietic derived cells. AAK64703 cc sequences from the present inwune/haematopoietic antigen genomic cc represent sequences used in the examplification of the present invention. AAK54942 to AAK54950 and AAM82169 xx

CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic camino acid sequences may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (I) expression. For cc treatment of diseases associated with inappropriate (I) expression. For cc that affect the activity of (I) by expressing inactive proteins or to cc that affect the activity of (I) by expressing inactive proteins or to cc supplement the patients own production of (I). Additionally, (I) cc polynucleotides may be used to produce the secreted (I), by inserting cc the nucleic acids into a host cell and culturing the cell to express the crocker of the cold treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cc cancers and cancer metastases of haematopoietic antigen genomic to AAK87994 represent human immune/haematopoietic antigen genomic crepresent sequences used in the exemplification of the present invention.
                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The cDNA library was constructed from mRNA isolated germinating shoots of the cultivar williams. The seeds were allowed to germinate for 24 hours prior to being cold stressed for 2 days at 4C. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-xhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GibcoBRL). This library was constructed in the laboratory of Dr. Randy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                //lab_host-"XLI-Blue"

//lab_host-"XLI-Blue"

//note-"Vector: BlueScript SK; Site_1: Eco RI; Site_2: XhoI

/ The library is from early (spring) wood, taken from
three six-year old trees (three different genotypes), in
the juvenile phase. These trees were induced to form side
wood by bending to a 45 degree angle and tying them to the
ground. Differentiating xylem was harvested from the sides
of the inclined stems, and a mixture of all three
genotypes was used for the library. oligo-dT primed cDNA
was directionally cloned into the EcoRI-xhoI BlueScript SK
vector arms. NOTE: The sequences contain a 'cDNA adapter'
between the EcoRI site and the start of the EST. The
adapter sequence is 'AATTCGGCACGAG'."

                                                                                                                                                                                                                                                                                                                                                                                                                                      Thote—"Vector: pBluescript SK-; Site_1: EcoRI; Site_2: XhOI; Construction of the cDNA library was carried out using Stratagenes (IniZAP) - cDNA synthesis kit'. cDNA was constructed using an oligo of primer/linker that contains a XhOI site within it. Following ds cDNA synthesis, EcoRI adapters within it. Following ds cDNA synthesis, EcoRI adapters were ligated to the blunt ends and sample was digested with XhOI. The result is cDNA with an EcoRI sticky end on one side and a XhOI sticky end on the other. This cDNA was ligated directionally in UniZAP arms. The vector is designed containing the pBluescript sequence as well as lambda DNA and cDNA is cloned within this pBluescript sequence. The vector was then packaged using Gold giapackaging extracts. Library was grown in XIIBlue MRF' cells and amplified. The library was grown in XIIBlue exassist as a helper phage that releases the pBluescript sequence and circularises it as single stranded plasmids that are then packaged (by helper phage) and secreted out of the host cell as phagemids. SOLR cells were transformed with phagemids and the library was plated out on LB-amp plates to select for transformants. Approximately 1,000,000 colonies were grown and recovered by using Ouiagen Midi prep kit. 2 micro grams of each library were used to transform DH10B cells by electroporation."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /clone="pep_SOURCE_ID:PPN080304"

//note="vector: BlueScript SK; Site_1: Eco RI; Site_2: XhoI
; The library is from early (spring) wood, taken from
three six-year old trees (three different genotypes), in
the juvenile phase. These trees were induced to form side
wood by bending to a 45 degree angle and tying them to the
ground. Differentiating xylem was harvested from the sides
of the inclined stems, and a mixture of all three
genotypes was used for the library, oligo-dT primed cDNA
was directionally cloned into the EcoRI-XhoI BlueScript SK
vector arms. NOTE: The sequences contain a 'CDNA adapter'
between the EcoRI site and the start of the EST. The
adapter sequence is 'AATTCGGCACGAG'."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      //note="Wector: pBluescript SK-; Site_1: EcoRI; Site_2: /note="Wector: pBluescript SK-; Site_1: EcoRI; Site_2: /note="Wector: pBluescript SK-; Site_1: AcoRI; Construction of the cDNA library was carried out using Stratagenes 'UniZAP - cDNA synthesis kit'. CDNA was constructed using an oligo dT priner/linker that contains a XhoI site within it. Following ds cDNA synthesis, EcoRI adapters were ligated to the blunt ends and sample was digested with XhoI. The result is cDNA with an EcoRI sticky end on one side and a XhoI sticky end on the other. This cDNA was ligated directionally in UniZAP arms. The vector is designed containing the pBluescript sequence as well as lambda DNA and cDNA is cloned within this pBluescript sequence. The vector was then packaged using Gold giappackaging extracts. Library was grown in XLIBlue MRF' cells and amplified. The library was excised by mass excision using Stratagens 'Mass excision kit' that uses exassist as a helper phage that releases the pBluescript sequence and circularises it as single stranded plasmids that are then packaged (by helper phage) and secreted out of the host cell as phagemids. SOLR cells were transformed with phagemids and the library was plated out on LB-amp plates to select for transformants. Approximately 1,000 ,000 colonies were grown and recovered by using Onlagen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ,000 colonies were grown and recovered. The double stranded plasmid library was recovered by using Quiagen Midi prep kit. 2 micro grams of each library were used to transform DH10B cells by electroporation."

                                                                                      Email: tshini@enes.nig.ac.jp

A backbone of the vector is basically from pBluescript(KS), that was in vivo excised from a modified lPS phage vector (Mo bi Tec, Germany). 5' end of the cDNA that was digested with Xhoi was ligated to Sall site of the vector and the 3' end including polyA tail was ligated to BamHI site of the vector. cDNA instert could k amplified with conventional T7 and T3 primers. This full-length cDNA library was generated basically according to the method described in The Plant J 15, 707-720 (1998) Seki M. et al. Protonemata were blended by the POLYTRON, and then cultivated on the BCDATG medium for 13-14 days under the continuous light.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BJ171523

This full-length cDNA library was generated basically according to the method described in The Plant J 15, 707-720 (1998) Seki M. et al. Protonemata were blended by the POLYTRON, and then cultivated on the BCDATG medium for 13-14 days under the continuous light.
